

Sangola College, Sangola
Dept. of Computer Science & Applications
B.Sc (ECS)-III Div-B
(Data Mining using weka)
ASSIGNMENT No-01

Date: 30/01/2025

Create a Student.csv dataset. Solve following questions with the help of Data Mining Tool WEKA.

Sid	Sname	Course	Gender	Age	Attendance
101	Karan	BCA	Male	20	high
102	Anjali	ECS	Female	18	medium
103	Rohit	MCA	Male	21	low
104	Kajol	MSC	Female	22	low
105	Shruti	BA	Female	18	medium
106	Satish	BCA	Male	19	high
107	Laxman	BA		200	
108	Sarang		Male		
109	Kapil	BCOM		220	low
110	Harsha	ECS	Female		

Apply Pre-Processing techniques are:

- 1) Load Dataset
- 2) Add new attribute as “Grade” at index number 5 with Nominal data type having {Dist., First}
- 3) List the attribute names
- 4) Find an attribute which has 30% missing values in the dataset
- 5) Remove any attributes if the missing values are more than 50%.
- 6) Convert “Sid” attribute numeric value to nominal
- 7) Replace missing data if there is any
- 8) “Age” attribute into three bins(intervals)
- 9) Copy attribute age at 3rd position.
- 10) Check whether there is an outlier or extreme value in the data set.
- 11) Remove outliers and extreme values whose values are 0.
- 12) Rescale “age” attribute
- 13) Reorder the data
- 14) Removing duplicates
- 15) Apply attribute selection
- 16) Replace the missing value with constant value, Change numeric value with 1 and nominal value with N/A
- 17) To retrieve all instances (rows) from dataset whose age is above 20
- 18) Remove 20% instances of dataset using Remove Percentage filter.
- 19) Produce 15% random resample of dataset
- 20) To change name of attribute Sname to Stud_Name.
