

Assignment No.1

1. Write a Python GUI program to create a label and change the label font style (font name, bold, size) using tkinter module.
2. Write a Python program that creates a Tkinter window with a Frame widget containing multiple labels, Entry widgets, and buttons. Put these widgets inside the Frame using the Place geometry manager.
3. Write a Python program that builds an employee list application with a Listbox widget to display names. Use the Pack geometry manager to align the Listbox and buttons.
4. Write a Python program that implements a contact information form with labels and Entry widgets. Organize them within a Frame widget using the Place geometry manager.
5. Write a Python GUI program to create a Menu bar with File, Edit, and Help menus, each containing submenu items using tkinter module.
6. Write a Python GUI program to create a Colorchooser widget to select a color using tkinter module.
7. Write a Python program that allows the user to draw and manipulate geometric shapes (e.g., rectangle, circle) on the "Canvas" using Tkinter
8. Write a Python program that implements a temperature converter application using Tkinter, allowing users to convert between Celsius and Fahrenheit.
9. Write a Python program to create a Tkinter-based login form with input fields for userid and password.
10. Write a Python program that displays a button using Tkinter. When the button is clicked, display a message box with the message.
11. Write a Python program that implements a simple calculator application using Tkinter with buttons for digits (0-9) and arithmetic operators (+, -, *, /). Implement event handling to calculate
12. Write a program to draw different shapes.
13. Build a simple application with Tkinter that includes widgets such as labels, buttons, entry fields, and text areas and arrange widgets using different geometry managers (pack, grid, place) to create the desired layout. Validate user input and provide feedback for invalid entries using message boxes or labels.
14. Develop a CRUD (Create, Read, Update, Delete) application with Tkinter for managing a simple database-backed model.

Assignment No.2

1. Write a program to create Thread by using various methods.
2. Write a program on inter thread communication by using event.
3. Write a program on inter thread communication by using condition.
4. Write a program to demonstrate use of semaphore.
5. Write a program to demonstrate the limitation of Lock.
6. Write a program to create a thread by using parameterized function.
7. Write a program to demonstrate use of sleep method .
8. Write a program to demonstrate use of join method .
9. Write a program to create connection with Mysql database.
10. Write a program to create mysql database "college".
11. Write a program to create tables student, book, employee.
12. Write a program to insert multiple records in table.
13. Write a program to Select and update records in table.
14. Write a program to delete specific record in table.
15. Write a program to call parameterized procedure.
16. Write a program to retrieve a data by using procedure.
17. Write a program to update a data by using procedure.
18. Write a program to create TCP client socket
19. Write a program to create TCP Server socket
20. Write a program to display IP address, port number.
21. Write a program to display URL information.
22. Write a program to create application to sending E-mail.

Assignment No.3

1. Create simple web project in Django to display Hello World message.
2. Create simple web project in Django to demonstrate the use of HTTPResponse.
3. Create simple web project in Django to demonstrate the render method.
4. Create simple web project "COLLEGE" with app "DEPT". Design at least three URL patterns and views to show department info.
5. Create web project with multiple apps which contain the following web pages(Template). Index page, home page, data page.
6. Create web project with static files(CSS,JS, Image).
7. Create web project to demonstrate simple file upload.
8. Create web project to demonstrate admin panel.
9. Create web project by using Django template TAGS.
10. Create web project to register model in admin panel.

11. Create web project with multiple templates(template for inserting data, display data list, display data table)
12. Create CRUD web project for student registration.
13. Create web project to demonstrate authentication and authorization.
14. Create web project to demonstrate Django forms.
15. Create web project to demonstrate Django Model forms.
16. Create web project to demonstrate session and cookies.
17. Create web project to demonstrate authentication and authorization in REST framework.
18. Write a python program Create a list and perform append, insert, delete
19. Create and display a student grade dictionary(rollno, grade)
20. Create a basic login form using Entry and Button
21. Draw shapes on Canvas (rectangle, line, oval)
22. Use Listbox and Radiobutton in a form
23. Connect to MYSQL database and create a table
24. Insert and retrieve records
25. Update and delete records in student table.
26. Create a Django project and app for student management.
27. Display a webpage using templates (use 2 templates)
